

Dashboard

A real-time command center for the whole blood bank operation

OVERVIEW

The Dashboard is the first screen staff see when they log in. It pulls together donor counts, live stock levels, pending requests, and recent activity into one screen, so nobody has to check four different spreadsheets to know what needs attention right now.

KEY CAPABILITIES

- Total donors registered, and how many are currently eligible to donate today
- Total blood units available, summed across all 8 blood groups
- Pending request count, so urgent needs are never buried
- Total donations recorded to date
- A visual bar chart of stock levels for every blood group at a glance
- Automatic alerts: out-of-stock groups, low-stock groups, batches expiring soon, and critical requests awaiting approval
- A running activity feed of the most recent actions taken in the system

HOW YOUR TEAM USES IT

Staff use this as their morning check-in screen. Instead of manually cross-referencing inventory against outstanding requests, the alerts panel tells them exactly what to act on — for example, "O- is out of stock" or "1 batch expiring within 7 days" — so the right person can immediately go recruit donors of that group, or prioritize using older stock before it expires.
