

Inventory

A live, batch-level view of exactly what blood is on the shelf

OVERVIEW

The Inventory screen tracks blood stock down to the individual collection batch, not just a total count per blood group. Every batch carries its own collection date and expiry date, so the system always knows precisely what's usable right now.

KEY CAPABILITIES

- At-a-glance available units for each of the 8 blood groups
- "Record Donation" action that creates a new batch and updates stock immediately
- Batch-level tracking with collection date and expiry date for every unit
- Automatic freshness status per batch: Fresh, Expiring Soon, or Expired
- Filter the batch list by blood group
- One-click removal of expired or emptied batches to keep the shelf list clean

HOW YOUR TEAM USES IT

Lab and storage staff use this to know exactly what's usable and what's about to spoil. The "Expiring Soon" flag lets staff prioritize using the oldest stock first — standard blood-bank practice — rather than discovering expired units during an audit. When a request is fulfilled elsewhere in the system, this screen updates automatically, so it's never out of sync with what's actually happened.
