

Donation Log

The complete, audit-ready history of every donation ever made

OVERVIEW

The Donation Log is a chronological record of every unit of blood ever collected — who gave it, when, and at which collection center — generated automatically from real donation records rather than kept as a separate manual log.

KEY CAPABILITIES

- Full history of every donation: date, donor name, blood group, units, and collection center
- Sorted with the most recent donations first
- Quick-access shortcut to record a new donation without leaving the page

HOW YOUR TEAM USES IT

This is the record staff pull up for audits, reporting to health authorities, or identifying repeat donors for recognition and outreach programs. Because it's generated automatically from the same data that drives the Inventory screen, it can never drift out of sync with actual stock — there's no separate spreadsheet to reconcile.
